

MIPRO⁺

Precision in Healthcare

HOLLOW FIBER HEMODIALYZER

透析器

HIGH FLUX

HD-17H

BLOOD FLOW

Membrane Area 1.7 m²

Advanced hemodialyzer designed for efficient blood purification, superior biocompatibility and optimal dialysis performance.

**HIGH
PERFORMANCE**

S.E.T. / A.S.M. / P.E.T.
Technology

**EXCELLENT
BIOCOMPATIBILITY**

Superior compatibility for
better patient safety
and comfort

**EFFICIENT
ULTRAFILTRATION**

Optimized membrane
structure ensures high
ultrafiltration coefficient
and performance

EASY TO CLEAN

Excellent cleaning
performance and
reduced albumin loss

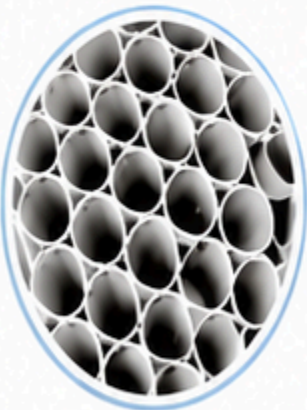

SAFE & RELIABLE

Sterilized by gamma
radiation, pyrogen-free,
for maximum safety

PUREMA[®] PES MEMBRANE

Polyether sulfone (PES) hollow fiber membrane imported from Germany.

SUPERIOR BIOCOMPATIBILITY

Minimize inflammatory response
and improve patient tolerance

HIGH PERMEABILITY

High clearance of uremic toxins
for effective dialysis

LOW ALBUMIN LOSS

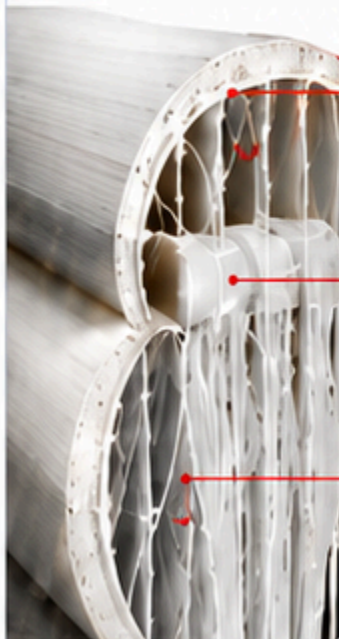

Advanced membrane structure
reduces serum albumin loss

EXCELLENT STABILITY

Exceptional thermal and chemical
stability for safer use

TRIPLE-LAYER ASYMMETRIC STRUCTURE

Ultra-thin endothelial layer

Ensures high dispersion efficiency
and excellent biocompatibility

Middle supporting layer

Resists endotoxin penetration
and provides structural support

Finger-like support layer

Enhances membrane strength
and improves diffusion &
convective transport

ADVANCED TECHNOLOGIES FOR BETTER DIALYSIS OUTCOMES

S.E.T.

(Sieving Enhancement Technology)

More uniform pore size and thinner
membrane wall for higher filtration
efficiency and better clearance.

A.S.M.

(Surface Active Treatment Technology)

Reduces protein adsorption and platelet
adhesion, minimizes coagulation and
albumin loss.

P.E.T.

(Performance Enhancement Technology)

Optimized dialysate flow distribution,
increases effective surface area and
ensures high clearance performance
throughout the treatment.
